

Jaime Maniatis

Greetings,

I live just 8 minutes from this amazing Delaware River, where beautiful bald eagles perch in search of fish for food from the river, along with other animals who also eat the fish and drink the water. Waste water from fracking contains poisonous carcinogens, neurotoxins and radioactive material. I do not want these substances anywhere near this amazing wildlife along the Delaware, nor near my home, or near my or other's children. I want to see Bucks County and surrounding areas remain a safe place for all living creatures, our young ones, and future generations etc. to live.

Those who support businesses who are willing to allow poisons to pollute this river, are in truth trading in the health of both current and future children and wildlife, to earn billions for themselves. This is not only a pollution of our precious waters, but even worse, a pollution of our precious ethics and values.

No problem is solved if some will win and others loose, with more problems being created. When our leaders honor what are true values, become open and courageous enough to step out of the box, to make truly innovative, choices that will benefit all, there will be a ripple effect. Preserving the waters of the precious Delaware will not only benefit all now, but can create waves of unexpected prosperity, on every level and in ways we cannot even imagine yet, that future generations ahead will forever be thankful for.

To close with this valuable Native American message worth taking a moment to both pause and breath upon, "We do not inherit the Earth from our ancestors — we borrow it from our children."

Thank you
Jaime Maniatis
