

Primavera Boman

It is a known fact that Fracking is dangerous for humans. The area's water supply get's poisoned. To ignite the many small explosions Radioactive waste is used. There is no end to the health dangers of Fracking. People get cancer. Dogs lose their hair. Fire sometimes comes out of the houses' water taps. Houses explode. In Ireland even earthquakes erupted. Governor Como a while ago signed a paper that there would be NO FRACKING in NEW YORK STATE. . . There is only 30 years supply of Shale anyway and it still is a fossil fuel causing climate change and unwanted weather disasters. The Arab oil well owners have for years invested in Renewable energy. Why isn't the United States. --Shale gas extraction ie Fracking, is no longer the cheapest form of fuel and energy. Oil ;prices have come down and many countries are also investing in all the new forms of Renewable Energy. Fracking is a bad technique that will ruin many lives, while just making a small amount of people rich!

Put a stop to all Fracking in the USA PLEASE!

There is Solar, Wind, Biofuel and

Hydrogen Fuel <https://www.youtube.com/watch?v=R15R54oZAdA>

and the Algae Industry
