

Paul Mendelsohn

I strongly urge you to prohibit fracking in NY and furthermore, to deny the transport of fracked gas, the transport of frack waste or the treatment of frack waste in NY.

You are surely aware of the level of water contamination. Water is our greatest resource and will, if left unpoisoned, be NY's ticket to revitalize local and organic farming grow and people continue to look to NY for a good, healthy place to grow their families and for recreation.

Water should not be allowed to be drawn from the Delaware River to further the destruction of surrounding communities.

Thank you
