

## Rev. Marcelle McGovern

. As I see it, approval of this legislation would give corporations a shoe in to frack our river in the future. Very dangerous. I don't want dead bald eagles along our river. I've been seeing them perched in trees along the river only recently. They are eating the fish in the river. Other animals eat the fish and drink the water. Waste water from fracking contains carcinogens, neurotoxins and radioactive material. I do not want this material anywhere near my home, my river, my children, other people's homes or children, our eagles etc. I want this area to remain beautiful and a safe place for our children, their children and all my parishoners to live. I totally oppose the proposed hydraulic fracturing and related amendments. I do not want fracking in or around the Delaware River Basin, waste water storage in or around the Delaware River Basin, or water drawn from the Delaware by corporations involved in such activities.
