

mark smith

I urge in the most emphatic way that the DRBC totally ban hydraulic fracturing AND any related activity, such as the taking of water for fracking purposes from any stream within the Delaware Basin. And/or the release of any water that has been used in the fracking process.

As the commissioners well know some seventeen million people depend on the clean waters of the Delaware watershed for their domestic water, so imperiling that supply in any way is grossly irresponsible And is a failure to adhere to the founding documents of the DRBC.

It is now necessary for the Commissioners to Fully protect a vital resource and not yield to the pressure from multi national corporations or politicians serving corporate interests.

I have attended the last two DRBC meetings and will the next in Philadelphia to show my support for a total and complete ban on fracking and all it's related actives.

Sincerely, Mark Smith
