\* Prevent the natural gas fracking industry from sending its polluted wastewater into the Delaware River watershed and

\* Prevent natural gas frackers from grabbing water out of the Delaware River Basin.

Slowing the spread of fracking will help keep our country from growing even more dependent on the fossil fuels that are driving climate change. The Delaware River basin should not become a dumping ground or water spigot for natural gas drillers.

\* The commission deserves thanks for its plans to continue the ban on natural gas fracking in the Delaware River watershed.
