

Charles Phillips

Fracking and fracking waste must be banned from the Delaware River basin, as this area provides drinking water to 5% of America, and is the only mainstem river in America that has not been dammed. The Delaware Water Gap National Recreation Area provides recreation to millions every year, the shad run is of economic and recreational importance, and people eat fish out of the Delaware from Cape May to Delaware County New York. Let's not let short-term profit destroy the long-term health of this pristine river and millions of Americans.
