

## Brianne Lisk

I feel that the potential for adverse public health and environmental impacts far outweigh the benefits of fracking. We need to have a long-term view when making these types of decisions. The possibility of destroying our environment and source of drinking water for millions of people should not be allowed. I support a permanent ban on natural gas drilling and fracking and all related activities (including wastewater processing and discharges from and water withdrawals for drilling and fracking operations) throughout the Delaware River Watershed.
