

Jennie Spector

All fracking should be banned in the Delaware River Basin. Fracking has been proven to have disasterous environmental impacts, including ruining water supplies.

There is significant evidence that natural gas development, and its related operations, which include all the phases of the hydraulic fracturing ("fracking") process, from the first stage of industrial land preparation; to the storage, handling, and use of chemicals and additives for extraction and stimulation; to drilling and fracking; to the withdrawal of and degradation of large volumes of water and its discharge and disposal as waste, has substantial adverse effects on public health, property interests, agriculture, and on our air, water, and land.

People's lives and health are more important than the profits of natural gas companies!
