

Victoria Gershik-Thompson

I have been informed by a public forum from caring individuals that changes are being voted on regarding important decisions for the Delaware River basin. I work in the Environmental field daily and I see the challenges facing business and environment. We need to choose wisely, proceed carefully on projects affecting our watersheds and rivers and waterways. I understand the pressures on business and projects. I am not comfortable with the prospect of decisions being made about contracts that affect our common-shared environment without disclosure. I do not support this amendment to allow the Executive Director to make decisions without public disclosure. This type of amendment perpetuates environmental injustice.
