

## Susan Becker

To Whom It May Concern: My husband and I love to canoe and camp at the Boysen Reservoir in the summer. It is so different than where we live in North Central Wyoming. We love to take advantage of the variety of landscapes and waterways throughout this state that we love and where we have lived the majority of our lives. We were shocked to hear of the proposal to discharge polluted and frack wastewater into the Boysen Reservoir and the Wind River and Big Horn Rivers!! It is beyond anything we could ever imagine. What would be the sense in polluting these waterways and vacation sites? This would be the beginning of the end of Big Beautiful Wyoming. There is already enough damage done by fracking at the cost to Wyoming tax payers by those who have come and gone and never cleaned up. We understand that those who still feel the need to fracture the earth beneath for someone's profit...certainly not mine....must return that polluted water to the earth in some way, shape or form but please, not here. We need to get smarter about this all the way around but for God's sake, please do not allow this permit to go through in that beautiful part of our state. It's sure easy to mess it up but lifetimes to clean it up.

Thank you in advance for considering a "no" on this permit for the sake of Wyoming and its citizens.
