

Birgit Burke

I object to using Boysen reservoir as a dumping ground for produced water. This is a state park and recreation park heavily used by people, and its waters should be protected for swimming, drinking water, and fishing. Aethon can figure on cleaning up its own waste water as a cost of doing business. Dumping it in our water and expecting us to be okay with absorbing their pollution is not okay. If they won't even tell us what is IN their discharge, why would we be okay with having it in our reservoir?
