

Willis Patterson

If ever there was ever a situation where something will inevitable go wrong, This is it !!
The drainage of TOXIC Chemical Waste into BOYSEN Reservoir has to be high on our Wyoming Resident's concern!

It is Highly unlikely the DEQ would be able to constantly monitor all releases, - - -questionable or not. Evaluation is often left to outside sources which are just NOT responsible in any way!
The long term statewide history of allowed contamination, Is glaring from the past and continuing news releases!

By example, The pollution left from all the those drilling rigs that pulled out of Wyoming - In the dead of night, without cleanup, and owing the state millions of dollars, over the years, is a testament to how to RUIN the water, land, and Wildlife.....and NEVER pay ANY clean up costs
WHATSOEVER !!! RE: - - (Governor's concerns related to news articles).

This whole plan sounds like some kind of a "Sweetheart Deal" ... for "Special Interests"!!
There has seldom been any meaningful financial damage reparations in the history of our state..... !
