

Mak Kuchler

Reviewing the proposal proves difficult for a lay person, extremely technical documents. No doubt meant to be lengthy and complicated by design. Aethon Energy money hard at work trying to overwhelm us with bull. However, it does not take a rocket scientist to understand how devastating this proposal is to Wyoming. Are a few jobs more important than having safe, clean, and healthy water? After being denied their injection permit due to concerns of contaminating aquifers used for drinking water; they have moved to a plan for distributing their personal and environmental destruction far and wide. From their wells - to the badwater , to our beautiful boysen reservoir, to the wind river, bighorn river and beyond. What is wrong with us that we are not outraged by allowing oil and gas interests to take precedence over public interest. Are a few jobs worth distributing their pollutants into our waters; impacting our drinking water, our environment, our magnificent wildlife?

When they are done, they will take all their money back to Dallas,Tx and leave Wyoming with the devastation created by their greed! They do not care about your quality of life or that of your children ... they must be republicans!
