

Clara Wilson

Please do not approve the discharge of waste water from the Moneta oil and gas production. A safer solution must be found. Contamination from this water would affect livestock, wildlife, fish, and crops, as well as drinking water.

A few years back my family, neighbors and I were involved with the proposed dumping of contaminated water from the Powder River Basin into the Cheyenne River by Phillips and Conoco. The same issues apply to this. Water is precious! Please protect it.
