

Robert Nagel

Dear WY DEQ,

I am writing to express my strong opposition to issuing Aethon Energy a discharge permit to dump fracking waste water into Boysen Reservoir. Why on Earth would you allow contaminated water from fracking to be dumped into a reservoir where people recreate, camp and fish? When is the State of Wyoming going to finally diversify the economy and stop relying on the polluting energy industry to run the state? Are there already not enough examples of how fracking is polluting the states precious water resources? Our water is one of our most precious resources. Please don't allow this disaster to go forward. I urge you to not approve this permit and instead vote to protect this state's valued resources. Thank you for the opportunity to comment.
