

## Stephen Delger

I am asking, not demanding that you do not allow the downstream disposal of waste water into Boysen Reservoir. The short term gain for this action will never repair the long-term damage they are most assuredly going to do not only to that beautiful reservoir but also downstream fisheries and water supplies. I want it stopped. For the love of God, I want you to not allow this to happen. Please ask them to instead drill disposal wells and put that fluid back in to their gathering system deep into the earth. I know this will work. PLEASE!!!
