

elaine casteel

I attended the public meeting in Riverton and was very disappointed in the presentation of facts and information given. Very little explanation was given about the actual process to clean the water for those who were not familiar with this subject. There were a lot of charts that made little sense even to those who were lucky enough to hear the presentation. The mike didn't work and there were people standing in the hall because the room was not adequate to hold the large number of people who attended and not all questions were given the equal time. One young lady was basically shut down for voicing her opinion and then ignored! Your lack of professionalism makes me wonder if the meeting was just giving lip service to the public to get them to back off and to keep us uninformed! Do you really care? Didn't look like it.

I am totally against what you are doing!! You may know about the extraction business but I doubt if you know much about water. Water has memory and you can't filter that out. Reverse Osmosis doesn't filter all chemicals out of the water. In Demick Pa. certain chemicals destroyed the RO filters.

We are talking about peoples drinking water! What gives you the right to poison it? Dick Cheney gave you free rein to poison people for profit. SHAME ON YOU! It's time to move into the future and let the fossil fuels go the way of the dinosaurs....extinct! Why is it that man always finds ways to make money but never thinks beyond that point and never about the consequences of the waste product from his brilliant idea? So he try's to pawn it off on the innocent people by convincing them that a little poison is good for you.

Once again NO we don't want your dirty water!!  
And I will hold you personally responsible if you let this go thru.

Sincerely,

Elaine Casteel
