

Greg LARSEN

With today's tech it safe to Dishare produced water. We have several oilfields located in Fremont county that have been discharging water for many years and the benefits are great. Maverick springs circle Ridge sand draw south sand draw and frenchie draw. This water is beneficial to the ranchers livestock as well as the wildlife that inhabits the areas.

The jobs that this would create are a huge boost the economies of city County and state as well as the numerous businesses that would help.

I see absolutely no reason to not go forward with this project.
