

Elizabeth Duff

You are contributing to the destruction of many species to include homo sapiens which is the human species. The world depends on our water supply. Scientists understand one world culture. Scientists understand the negative effects of chemical pollution. They understand that our water supply is diminishing. We will soon lose 100 MILLION species in a relatively short period of time. It would be highly unlikely that Wyoming could produce enough revenue to distill or ultrafiltrate our drinking water. Gas and oil are toxic chemical substances. It is these substances that will cause mutations if ingested by humans. The companies that are doing this must be environmentally sound. Otherwise these companies will be liable for longterm ingestion of mutagenic and toxic substances. Please protect the water supply. Biofuels need to be a thing of the past. Please be ethical and cause no harm to the human species and the residents of Wyoming. Decide if you are money driven or wish the financial expense of a reasonable drinking water emergency. Bio fuels should be a thing of the past.
