

John Osgood

Come on, you folks, what is on your minds? You don't dump potentially very polluted water into a public waterway. You've got tons of water-based recreation going on downstream. You at least need to sample and assay what is in the water before turning it loose. You're supposed to be working for us. We have all too many examples of hazardous materials and substances turning up in public waters. Let's start being prudent and embrace the precautionary principle. Thank you.
