

## Bryce Stewart

NO, again, respectfully, NO. Who would think this is ok? The company created the "waste" they can clean it up and figure out what to do with it, instead of dumping it into our systems. Should we start dumping hot water heaters/stoves/re-fridges/cars into the rivers again??? Might as well if we are going to allow them to be dumping sites.

At the very least they should have to process it to the point that "you" could go out and drink a glass of it. Then they can dump it.

The world has been used and abused enough, this needs to be stopped.

Thank you for your time.

Before they dump, "you" go drink a glass and bring a gallon home and let your family drink it.
