

Andrew Carson

Greetings, DEQ;

I write today to object to the proposed dumping of wastewater from drilling activities from the Moneta Divide project. The continued abuse of Wyoming's water for the convenience of industry should end, as water is the fundamental element for our state. It is under excessive demand and has been categorically downgraded recently by the state. How low are we willing to see our water quality go?

Please prevent this continuation of a river that drains much of the state. It's too important to mess up. Thank you and have a good day. Sincerely, Andrew Carson Wilson, WY
