

Amanda Campbell

Don't discharge produced water (fracking fluid) into the reservoir. Enforce Aethon Energy to treat the produced water to drinking water quality standards. Monitor the treatment process to ensure that no frack fluids remain in the water before it is piped to the reservoir. These waters are a place that generate tourist economy from fishing, that host families every year, through nearly every season, and are a staple to our clean and accessible wilderness. Please do not compromise this by allowing unsafe and unnecessary dumping to happen on our lands.
