

Nancy McCoy

My name is Nancy McCoy and I live in Clark, Wyoming. In August of 2006 we had a gas well blow out caused by Windsor, LLC that spewed natural gas and toxic chemicals for 56 hours in a residential area. There was even a delay in notifying residents that they should leave. Water wells were contaminated leaving residents afraid to drink or shower in it. After years of public meetings between residents of Clark with Windsor and DEQ of trying to resolve this disaster, impacted residents saw first hand how the state was more interested in bolstering oil and gas than protecting human health and safety, along with their property values. The contamination was never cleaned up because they couldn't. It was left to natural attenuation. I'm relating my story because I have seen first hand what a dirty industry oil and gas development is and the deadly pollution it leaves behind. My experience has shown me that the oil and gas companies care nothing about the beauty of our environment or the wildlife and people that live there and savor it's beauty. I strongly feel that the level of pollution proposed for Boysen Reservoir is unnecessary and unwanted by Wyoming residents. Thank you for considering my comments.
