

Lynne Berg

We must prevent polluted fracking wastewater from an oilfield from being discharged into Boysen Reservoir and the Wind and Bighorn rivers. The polluted water threatens our communities, outdoor recreation, human health, fisheries, and local economies.

I am against the Wyoming Department of Environmental Quality plan to issue a discharge permit to Texas-based Aethon Energy to dump up to 8.27 million gallons per day of oilfield wastewater (frack water) into tributaries of Boysen Reservoir.

DEQ

1. Do not discharge produced water (fracking fluid) into the reservoir.
2. Enforce Aethon Energy to treat the produced water to drinking water quality standards.
3. Monitor the treatment process to ensure that no frack fluids remain in the water before it is piped to the reservoir.

Save our waterways and natural habitats!!!!!!!!!!
