

Mike Starks

Bottom line is simple, natural gas is a very alternative to coal for generating electricity. This project, from the information I have is been in the planning stages for 8 plus years and it is at its final hurdle. Discharge water is as clean as drinking water from the tap in Riverton Wy. Should be no problem for ANYONE down stream from the discharge area. I'm sure that water will Be cleaner than the water coming from Bull lake. No dead animals, old cars and trucks or garbage in the way. I feel this will help an economy in Fremont country that has slowing for some time. Taxes won't hurt either.

Thanks,
Mike Starks
