

## Chris Scheibe

The country has plenty of options for natural without intentionally polluting our water. These companies come in, rip and tear with no regard for our states future and take their riches back to Houston. Our water should be protected for the future, like those in the past protected it for us. This kind of disposal should NEVER be considered. We should watch out for each other and not crap on our fellow citizens down stream or down wind. There can be nothing worth doing this EVER! Do not allow this waste water to be introduced to our water ways.
