

## Jeannette Reina

Please do not allow fracking water to be dumped into Boysen Reservoir or its tributaries. Any waste water should be treated to high quality drinking water standards and tested (before dumping) for any and all chemicals, and not allowed to be dumped if it is not completely clear of these chemicals.

An outside neutral entity should be charged with the water testing, not the oil company itself.

I would dare anyone approving this process to drink the compounds as listed in attached EPA file and conclude that there are no problems with drinking hydraulic fracturing waste water.

Thank you.

Jeannette Reina
