

Mark Sanderson

This proposed discharge of produced water into Boysen Reservoir is so patently absurd, it hardly deserves comment. But since I do have the opportunity, I would urge you adopt Alternative 4; no action! I have not seen anything regarding the irradiation these waters inherently contain, but am very concerned about that. There is nothing about this proposal that makes any sense to anyone other than those who stand to gain financially on the backs of users downstream. I once again ask that you do not allow any water (treated or not) to flow into Boysen Reservoir from this gas processing facility period...end of story!

Thank-you for allowing me the opportunity to comment.
