

## Nancy McCoy

My name is Nancy McCoy from Clark, Wyoming and I am commenting on the Moneta Divide oil and gas field pollutant discharge permit - WYPDES Permit Number WY0002062 (Aethon Energy).

My urgent concern is that oil and gas field wastewater is being dumped into one of the most beautiful landscapes in Wyoming that is used by the public for swimming, boating, fishing as well as drinking water and crops. The costs to human health and the quality of life must be strongly considered and should be the main focus before any dumping by the Moneta Divide oil and gas fields move forward, if at all.

I also question why this is even being proposed when the Wind River is a Class 1 river which affords it the highest level of protection as per DEQ's own rules.

Has the monetary value been reviewed to see what financial impacts would be suffered by the state and people whose lives depend on the Boysen Reservoir?

Just because Aethon would love the easy way out and dump into one of Wyoming's most beautiful natural places doesn't mean it should be so.

Please analyze other safer options.

Thank you in advance for your consideration of the very important Wyoming issue.
