This letter is in response to the Moneta Divide oil and gas field pollutant discharge permit - WYPDES Permit Number WY0002062 (Aethon Energy). I am objecting to the issuance of this discharge permit because there are other options to dumping 2.27 million gallons a day of untreated and partially treated produced water into Boysen Reservoir. There is no reason to allow contamination of Boysen Reservoir and the Wind River which have such a high recreation value.

What is the plan for the produced water from the additional 4,000 oil and gas wells? Have all of the chemicals in this potential discharge been analyzed and evaluated?
