

Wayne Lax

My comments are in response to the Moneta Divide oil and gas field pollutant discharge permit - WYPDES Permit Number WY0002062 (Aethon Energy). Letting industry discharge millions of gallons of contaminated water into creeks and streams that flow in to freshwater supplies like Boysen Reservoir and the Wind and Bighorn Rivers is a terrible idea. It will cause horrible damage to the freshwater supply in this state. We can't afford to lose this precious resource of untainted fresh water. Please don't allow this!!!!
