

Roger Barber

I utilize Boysen Reservoir every summer for fishing, boating & camping activities. It is totally beyond my comprehension how DEQ could even give this permit application more than ten seconds of consideration. Thinking about allowing over 6 million gallons of crap per day to flow into this reservoir, which runs into the Wind River, Yellowstone River, Missouri River, Mississippi River is beyond incredible. DEQ is supposed to be the safeguard of Wyoming air & water quality, but appears to me to be in bed with energy producing companies and not doing things in the best interest of the citizens of Wyoming. Thinking you can just dump the stuff into a dry (mostly) streambed & not impact this reservoir is crazy talk. I would urge DEQ to deny this permit and make this company come up with some sort of realistic plan for dealing with the effluent they are generating or go out of business.
