

J Lien

This will have generational impacts upon the state. Wyoming will lose wildlife ,agriculture and drinking water. Drinking water is already a hard commodity in some neighborhoods when droughts happen. There is no reason to add to our stresses of water supply that is drinkable. This company could easily use a Wastewater well to dispose of its waste water as many other oilfield companies have in the beautiful state of Wyoming. Do not sell my water rights my agriculture or my wildlife to an oilfield company. I back oil production but not at the expense of water- I need it to live.

I negate the opportunity presented here within this permit.
