

Carol Pickett

You must be nuts to allow this company to even consider dumping contaminated water into our pristine rivers. I live in Thermopolis, and the last thing I want to drink is water left over from oil and gas processing. Surely there must be a more efficient way to dispose of their water than this. They will tell us it is perfectly safe, filtered well, no harm coming to us, but do you really believe that? If you do, I have an acre of swamp land to sell you. Stop this nonsense before it even gets started. The wildlife, plants, and residents upstream will be forever grateful. Thank you for stopping this threat to our water and our health before it gets started.
