

## Joseph Polzer

I thought we might be past all this. Dumping and destroying what is left of the old west. However I have personally been on these wells in this field. The cause of concern of transferring H<sub>2</sub>S gas in the used water should be researched before dumping or transporting even a single load. Even then, this a old bad idea. I can't even believe this was considered as a option. It's a NO! From me.
