

Popo Agie Conservation District

We like the new format of the executive summary and the 305(b) table.

On page i (Executive Summary), the Middle Fork summary says that PACD collected data from 2016-2018 and the data indicate that the recreation designated use is fully supported. We had one rolling mean exceed the criteria in 2016. Would you suggest removing 2016?

Under Appendix D, page 2 for the Little Popo Agie River listing, only oil and grease is listed as a cause of impairment. Hydrogen sulfide was also listed in the 2016/2018 IR. It was mentioned under the Executive Summary as inadvertently omitted from the text and tables of the 2014 IR.

The link to the Middle Fork Popo Agie River Assessment Record on page 23 is not working;
Server Error 404 - file or directory not found.
