As a citizen of Fremont County Wyoming I am greatly disturbed by the revised draft. It was clear at the community meeting held in Riverton Wy had significant support with very few against the permit as written. Revising the permit is undermining the wishes of the community by allowing people outside of the community and state to run an organized campaign to provide false information to derail the much needed economic boost to our community. Tests and studies have provided evidence in regard to the safety of water output. If the overwhelming support shown at the community meeting has been disregarding because of outside interests running a letter campaign the DEQ owes it to the public to either stand by the original permit or host more meetings to reinforce the opinions of those who live and work in our community make the decision.
