

Linda Olinger

I attended the DEQ's and Aethon's public presentation regarding the Moneta Divide Proposed Discharge Permit which was held at CWC in 2019. I submitted an official comment at that time and would now like to reiterate my position in regards to this issue. After reading on the DEQ website regarding the type and quantity of effluents that would be released into Boysen Lake and the Wind River, I have concluded that further expansion of the Moneta Divide with a certain accompanied increase in pollutant discharge will only harm the wildlife and humans who use these public waters for drinking, for agriculture and for recreation. The so called economic benefits of said development are limited to those invested directly in the industry.
