

## Marilyn Mullen

Thank you for listening to residents' concerns and improving the draft permit. Please set stronger limits on pollutants and **MAKE SURE AETHON CLEANS UP EXISTING DAMAGE** from decades of dumping toxic waste water in Badwater and Alkali Creeks. Please reduce the amount of discharged dissolved salts allowed. Please immediately reduce allowed chloride concentrations in Badwater Creek, instead of permitting four more years of this toxic chemical into our waterways. Please add limits and require testing for volatile and dangerous drilling waste products, including benzene, toluene, ethylbenzene, and xylene. When violations occur, please implement strong enforcement actions promptly. Please protect our waterways!
