This revised permit is a terrible decision by the WDEQ!!! Since the increase in discharge volumes are no longer being considered in the revised permit, the WDEQ shouldn't be able to add more regulations and restrictions to Aethon's existing permit. That's like changing the rules in the middle of the game. What there are doing now has been acceptable for many years, and should be allow to continue. This will set a terrible precedence for all of Wyoming's oil and gas industry. People's jobs are at stake. Don't change their existing permit. Thank you
