

Jeremy Saltgaver

I believe and have personally seen that Aethons water has done nothing but help the wildlife in the badwater drainage that flows to boysen reservoir. I have been hunting with my family for the past 30 years and it use to be a dry creek bed with no green vegetation and sparse wildlife. Over the past years with there clean water flowing down the bottom it is green and flourishing with all types of wildlife. They are doing absolutely nothing to hurt the wildlife they're doing the opposite they have made a balanced ecosystem that is very important to the wildlife that live in area. Please help protect the wildlife inhabiting that area by not taking away there water and food.
