

# Cross Roads Water Trucks

As a small business working in the Moneta Divide area (Aethon) we are very much in favor of approving the permit for discharging water. We are concerned about our business/employees and the loss of jobs that would create. We count on this opportunity to support many families, which in turn supports other business. As it was previously noted at several public forums this process is very much monitored and many professionals have stated that it will not hurt the environment. Some of these individuals are in the oil & gas industry as well as very much an outdoorsman, which says that they will do everything possible to keep the waters safe. Much of this discharge water helps local ranchers in watering their livestock. There are many benefits to approving this permit. Please consider all people, not just one side.
