

# Wyoming Community Bank

I just wanted opportunity to express displeasure in Wyoming's DEQ change in permit requirements for AethonWy0002062. This field has been vital to our employment and as a economic driver. Including the various taxes they have paid directly and indirectly to the state. Changing the rules mid stream to the permit is reacting to political winds versus using common sense. The elimination of water discharge resolves what? The waters (Boysen Reservoir)has not been contaminated. Aethon purchase this field in good faith to develop this field. Please recognize the grandfather permit structure and deal in good faith with our businesses.
