

Jeremy Molt

Thank you for the work to deny the Aethon permit to increase dumping into bad water creek. We must do everything we can to ensure that our water is clean and our people safe from disease and contamination. No amount of profit is worth our health and the health of our children. Please also consider the following action items in future engagements

.
Yours truly
Jeremy Molt

- Work with Aethon to clean up the existing damage caused by decades of oil field pollution in these streams;
- Immediately reduce the monthly load of salts currently authorized in both the existing and proposed discharge permit;
- Implement a one or two-year compliance schedule to achieve significant reductions in the concentration of chloride allowed in Badwater Creek. The DEQ's proposal to allow Aethon four more years to achieve full compliance with chloride standards is just too long;
- Deny any future requests to weaken the regulatory chloride standard currently applicable to Badwater Creek.
