

John Beck

Please reconsider your position on this permit. This permit should be grandfathered because companies have already invested in wells currently producing (some producing for over half a century) that are now at risk due to new compliance requirements. The local economy is struggling and this will be devastating to our communities. I've worked in the natural gas industry my entire career and it is sad to see existing infrastructure that could be producing and supporting taxes, that is now at risk to be shut in and abandoned.
