

Environmental Advisory Committee

The joint city/county Environmental Advisory Committee (EAC) would like to formally request that a mobile air quality unit be positioned in West Laramie. A 12-18 month deployment is desired, with particular focus given to air quality in the winter months and especially during times when Interstate 80 is closed for extended periods. This request is the result of citizen complaints of degraded air quality from idling semi-trucks that are waiting for the roads to re-open.

Our goal is to work with DEQ to help find a suitable monitoring location based on citizen concerns and to stay apprised of the data as it is collected. At the conclusion of the monitoring, EAC will be available to disseminate the information to both City and the County elected officials and staff as needed.
