

Jane & Faron Patton

I am usually all "for" anything that can supply jobs in the state, but I must ask at what cost! These Chemicals come with their own respiratory/cancer troubles. I think of the water table for our town of Pine Haven. I think of the homeowners and how this will affect their home values. We purchased our home last year, we may not have, had we been aware of this! 2 miles from our homes? From Keyhole? I am stunned it would even be a consideration! We are concerned about the air quality, Noise Pollution, such as Jake Brakes, and traffic on these small roads, will there be increased wear and tear and accidents. We consider this area a little piece of heaven with our views, the wildlife that frequents it, and the Peace and quiet. Is this mine worth destroying the way of life out here? I am sure some would say that this is an overreaction, and we all know that they would be the ones in favor of this mine. Why would anyone even take a chance? This is where we LIVE. Please deny this permit.
