

Elliott Golmon

C & H has been in business for 5 years without any violation, environmentally.

Allow sound science, not emotion when determining permitting status.

The introduction of "karst topography" as a reason to deny an operational permit potentially brings

30

percent of all farmland in Arkansas into regulatory question, as karst covers much of north and southwest Arkansas;

Changing the rules of their permit requirements AFTER the permit is issued is unfair and damaging

to

small businesses of any type;

The use of the Animal Waste Management Field Handbook are recommendations and not requirements.

Thank you for your time.
